## WHAT IS CLAIMED IS:

1. An electronic apparatus, including:

a liquid crystal device manufactured by a method for making the liquid crystal device, the liquid crystal device comprising:

a pair of substrates for enclosing liquid crystal; and

a plurality of filter elements aligned on at least one of the substrates, and the method comprising:

moving at least one of an inkjet head and the substrate in a first-scanning direction relative to the other, wherein the inkjet head has a nozzle line comprising a plurality of nozzle groups, each nozzle group including a plurality of nozzles;

selectively discharging a filter material from the plurality of nozzles to form the plurality of filter elements; and

moving at least one of the inkjet head and the substrate in a second-scanning direction relative to the other so that at least a part of each nozzle group is capable of scanning a same section of the substrate in the first direction.

2. An electronic apparatus, including:

an electro-luminescent device manufactured by a method for making the electro-luminescent device, the electro-luminescent device comprising:

a pair of substrates for enclosing liquid crystal; and

a plurality of filter elements aligned on at least one of the substrates, and the method comprising:

moving at least one of an inkjet head and the substrate in a first-scanning direction relative to the other, wherein the inkjet head has a nozzle line comprising a plurality of nozzle groups, each nozzle group including a plurality of nozzles;

selectively discharging a filter material from the plurality of nozzles to form the plurality of filter elements; and

moving at least one of the inkjet head and the substrate in a second-scanning direction relative to the other so that at least a part of each nozzle group is capable of scanning a same section of the substrate in the first direction.
